

Our goal is to maximize the functional independence of children with special health care needs through the use of equipment and technology.

❖ Adaptive Equipment enables children with disabilities to communicate, learn, play, interact, access, and control their environment.

❖ We work with children and their families to identify equipment and technologies that best suit their way of living, including home, school and community needs.

❖ Proper seating and positioning help to:

- Reduce or slow the progression of physical impairments
- Increase physical comfort
- Allow for increased mobility and access to our community
- Enhance social development
- Lessen the likelihood of more costly intervention later in life
