Families, visitors and individuals receiving care must mask at ChildServe if/when...

- You’ve had a known exposure (within the last 10 days) to someone who has COVID-19 or influenza
- Your child is returning from illness (your service will provide additional guidelines)
- You meet Return-to-ChildServe Guidelines, but still have lingering illness symptoms (such as persistent cough/runny nose)

Exceptions: children under two years old, or those who cannot safely mask

Otherwise – masking is optional, but is welcome/encouraged – especially during cold and flu season.

Known Exposure Definition – When you spend at least 15 minutes within six feet of someone who has COVID-19.

Some services have different regulatory requirements.
